Subject: We would like to announce that we have officially released Denso Coding for all types of Solenoid and Piezo Injectors.

This function is supported on software version v1.62.0 and later, for the Magneti Marelli CRU2R / CRU4R Common Rail injectors test benches. As for Bosch (**IMA, ISA**), and Delphi (**C2i, C3i**) injectors coding, it requires only RSP sensor (MM 007935100670), and onetime fee only. There is no maintenance or subscription fee for this function for the future.

Activation of the Denso injector coding function requires the generation of an activation code, based on the serial number of the Magneti Marelli CRU2R / CRU4R for which the extension is intended. The generated code is sent electronically and after it has been entered, you can use the Denso injector coding function indefinitely.
